

PROBLEM SOLVER

PROBLEM:

Ordinary welding blankets:

- Are thick, heavy, and prone to shedding.
- Are made of impregnated fiberglass which is not very flexible.
- Have low operating temperatures and are subject to burns and starting fires.

SOLUTION:

Heat Guard Welding Blanket

- Soft, flexible, NASA-developed carbon fiber material.
- Operating temperature: 1,800°F (982°C).
- Only 1/2" thick.
- Won't scratch or damage finished surfaces.
- Available in sizes up to 6' x 8' for maximum protection on the biggest jobs.

APPLICATIONS:

- Painted body panels
- Rubber suspension components
- Glass
- Intake and exhaust manifolds
- Vehicle interiors
- Catalytic converters
- Plastic fuel lines

INDUSTRIES:

- Automotive
- Transportation — Truck
