Many Customers Have Experienced The Following:

**PROBLEM:**
Sealing Threaded Joints in Pipes and Fittings
- Fittings can leak due to vibration, corrosion and pressure
- Hydraulic pumps and valves can clog if tape is used
- Sealing high-temperature and high-pressure fittings

**SOLUTION:**
Lawson's Tefseal Pipe Sealant with PTFE
- Cream form prevents leakage and loosening of hydraulic and pneumatic fittings; won’t clog valves and pumps
- Prevents leaks caused by vibration, corrosion and pressure
- Temperature range: –65°F to +500°F (–54°C to +260°C)
- Seals carbon steel, aluminum materials, Monel® and stainless steel
- Will seal connections carrying most industrial acids, solvents, chemicals, gases and steam

“Let me show you how it works”

**FEATURES:**
- Cures on stainless steel as well as carbon steels
- Temperature range: –65°F to +500°F (–54°C to +260°C)
- Can’t shred and foul systems like tape
- Two convenient sizes available
- Squeeze tube applicator is easier to use than tape
- Seals up to 3,000 PSI immediately
- Repositionable for 24 hours

**APPLICATIONS:**
- Sealing air pipes and hoses
- Sealing water pipes
- Sealing gas pipes
- Sealing steam pipes
- Sealing hydraulic pipes and fittings
- Sealing fuel oil lines
